#### Introduction

Section 165(i)(2) of the Dodd-Frank Act, as amended by section 401 of the Economic Growth, Regulatory Relief, and Consumer Protection Act ("EGRRCPA") requires certain financial companies with total consolidated assets of more than \$250 billion, and which are regulated by a primary federal financial regulatory agency, to conduct periodic stress tests to determine whether the companies have the capital necessary to absorb losses as a result of severely adverse economic conditions. These statutory changes became effective on November 24, 2019. The Federal Housing Finance Agency (FHFA) is the primary federal financial regulator of Fannie Mae and Freddie Mac (the Enterprises), and the 11 Federal Home Loan Banks (Banks). These entities are collectively referred to as the regulated entities.

FHFA's rule on Stress Testing of Regulated Entities (12 CFR 1238), along with these instructions and guidance, apply to the Enterprises because each Enterprise has total consolidated assets of more than \$250 billion. Due to their total consolidated asset amounts, function in the mortgage market, size of their retained portfolios, and their share of the mortgage securitization market, FHFA requires each Enterprise to conduct the stress test on an annual basis. Because the Banks do not meet the total consolidated asset threshold of \$250 billion, they are not subject to the stress test requirements of the rule.

The Enterprises' capital positions, supported and restricted by the Senior Preferred Stock Purchase Agreements with the Department of the Treasury, are unique. Nonetheless, the Enterprises incorporate capital into their business decision-making processes. FHFA expects the Enterprises to have processes and procedures for managing their businesses notwithstanding Treasury's support.

FHFA's stress testing rule establishes the basic requirements for each Enterprise to conduct Dodd-Frank Act Stress Tests (DFAST) and report the results. This summary instructions and guidance document supplements the rule. FHFA expects each Enterprise to follow the instructions and guidance in conducting stress tests and reporting and publishing results under the rule.

General instructions and guidance are provided relating to:

- Scenario assumptions
- Reporting and timing
- Stress test process governance
- Use of stress test results
- Incomplete data
- Evaluation of stress test processes
- Correspondence related to stress tests

#### **Stress Test Scenarios**

The stress tests are based on portfolios as of December 31, 2020. The planning horizon for the stress test is nine quarters, starting with the first quarter of 2021 and extending through the first quarter of 2023. The Enterprises are required to submit the results of stress tests based on two scenarios: Baseline and Severely Adverse. Assumptions for the variables in each scenario are contained in Appendices 3 through 7.

FHFA expects each Enterprise to use those variables that are relevant to the Enterprise's lines of business and that are consumed by the Enterprise's models. However, FHFA expects each Enterprise to apply all of the relevant global market shocks provided. Each Enterprise is expected to indicate which variables are included in its stress tests in its report to FHFA and the Federal Reserve Board of Governors (Board). FHFA also expects each Enterprise to extrapolate any of the aforementioned variables beyond the projection date as required. One year of scenario assumptions beyond the nine-quarter planning horizon will be provided and may be utilized, if needed. Historical data is provided should models require that information.

It is important to note that the scenarios and assumptions provided are not forecasts, but instead are hypothetical scenarios and assumptions to assess the financial strength of the Enterprises.

#### **Global Market Shock Assumptions**

The global market assumptions provided by FHFA are to be applied to the Enterprises' trading securities, available-for-sale securities, and other fair value assets as of December 31, 2020, for the Severely Adverse scenario.

The result of the global market shock is to be taken as an instantaneous loss and reduction of capital in the first quarter of the planning horizon. The global market shock should be treated as an add-on that is exogenous to the macroeconomic and financial market environment specified in the supervisory stress scenario. The Enterprises should assume no recoveries of the losses generated by the global market shock over the nine

quarters. The capital impact of the global market shock is carried over the planning horizon.

If an Enterprise can demonstrate that its loss-estimation methodology stresses identical positions under both the global market shock and the macroeconomic scenario, the Enterprise may assume that the combined losses from such positions do not exceed the losses resulting from the greater of the global market shock losses or the macroeconomic losses.

#### Counterparty Default Scenario Component

The counterparty default scenario component of the global market shock should be treated as an add-on to the macroeconomic and financial market scenario specified in the Severely Adverse scenario. The counterparty default scenario component involves an instantaneous and unexpected default of one of the following:

- an Enterprise's largest counterparty
  across the Enterprise's secured and
  unsecured lending, securities lending,
  repurchase/reverse repurchase
  agreements (collectively Securities
  Financing Transactions or SFTs),
  unsecured overnight deposits, and
  derivative exposures, as well as the
  potential losses and effects on capital
  associated with such a default;
- an Enterprise's largest counterparty across the Enterprise's single-family mortgage insurance providers and the potential losses and effects on capital associated with such a default; or

 an Enterprise's largest counterparty across the Enterprise's providers of multifamily credit enhancements and the potential losses and effects on capital associated with such a default.

The Enterprise should identify its largest counterparty as the counterparty that represents the largest total net stressed loss if the counterparty defaulted on its obligations. Net stressed losses for SFT counterparties are calculated after applying the instantaneous market shock to any non-cash SFT assets (securities/collateral) posted or received, and for derivatives, to the value of the trade position and non-cash collateral exchanged.<sup>1</sup>

The as-of date for the counterparty default scenario component is December 31, 2020 – the same date as the global market shock.

All estimated losses from the counterparty default scenario component should be assumed to occur instantaneously and should be reported in the initial quarter of the planning horizon.

More detailed instructions for implementing certain assumptions follow:

#### **House Prices**

The House Price Index assumptions provided by FHFA describe the path of national house prices. Each Enterprise should extrapolate the national house price path beyond the projection date as needed.

Each Enterprise should also translate the national house price path in each scenario to regional house price paths as appropriate for each Enterprise's models and should interpolate the house price paths to accommodate the frequency of data required by their models.

#### Missing Variables

Each Enterprise should use its internal assumptions for variables that its models consume but that FHFA does not provide.

#### **Balance Sheet Evolution**

Each Enterprise should use its internal assumptions to roll its balance sheets forward through the nine-quarter projection period. The assumptions should reflect reasonable expectations for future business and should conform to the Enterprise's internal strategic plan. The Enterprise should ensure that the size and composition of its book of business during the stress test is consistent with the goals in FHFA's Conservatorship Scorecard.

#### **Capital Actions**

The Enterprises should comply with the terms of the Senior Preferred Stock Purchase Agreements, as amended, to determine the level of dividends to pay over the planning horizon.

<sup>&</sup>lt;sup>1</sup> In selecting its largest counterparty, an Enterprise will not consider certain sovereign entities (Canada, France, Germany, Italy, Japan, the United Kingdom, and the United States) or designated central clearing counterparties.

#### **Operational Risk Losses**

Operational risk losses are losses that arise from external events or from inadequate internal processes, people, or systems. The Enterprises should estimate operational risk losses for each scenario and submit the results to FHFA.

#### **Changes in Accounting Standards**

The Financial Accounting Standards Board (FASB) periodically makes revisions to U.S. Generally Accepted Accounting Principles (U.S. GAAP). These changes affect an entity's financial reporting upon adoption by the entity. The FASB has made major revisions to accounting standards associated with recognition and measurement of financial instruments, revenue recognition, leases, credit losses, and derivatives and hedging. The effective dates for these standards ranged from fiscal years beginning after December 15, 2017, to fiscal years beginning after December 15, 2020.

An Enterprise should not reflect the adoption of new accounting standards in its projections unless the entity has already adopted the accounting standard for financial reporting purposes.

With regard to Accounting Standards Update No. 2016-13, Financial Instruments - Credit Losses (Topic 326): Measurement of Credit Losses on Financial Instruments (CECL), the Enterprises should include the effect of CECL.

When reviewing the processes, procedures, and reporting templates associated with the 2021 DFAST reporting cycle, FHFA will take

into consideration the potential challenge(s) associated with the implementation of CECL into the DFAST process.

#### **Reporting Format and Timing**

The Enterprises must submit results of the Baseline and Severely Adverse scenarios to FHFA and the Board on or before May 20, 2021, and must publicly disclose a summary of the results of only the Severely Adverse scenario between August 1 and August 15.

The results of an Enterprise's analysis for each scenario should encompass all potential losses and other impacts to net income and capital that the Enterprise might experience under the scenarios. In all cases, each Enterprise should substantiate that its results are consistent with the specified macroeconomic and financial environment and that the components of its results are internally consistent within each scenario.

The Enterprises are required to report the results using the DFAST templates provided in Appendix 2.

The Enterprises are also required to submit qualitative information describing the methodologies, including any simplifying or other assumptions used to produce the estimates, as well as any other information necessary to fully support the reasonableness of the stress test results.

Each Enterprise must submit its results and any supporting information to FHFA through a secure site. The Enterprises must use the secure server.

#### **Stress Test Governance**

The board of directors of each Enterprise or a designated committee thereof is responsible for reviewing and approving policies and procedures established to comply with the rule. Each board of directors should also receive and review the results of the stress tests for compliance with the rule and established policies and procedures. Senior management of each Enterprise is responsible for establishing and testing controls. Senior management and each member of the board of directors are to receive a summary of the stress test results.

#### **Use of Stress Test Results**

The rule requires that each Enterprise take the results of the annual stress test into account in making changes as appropriate to its capital structure (including the level and composition of capital), exposures, concentrations, risk positions, plans for recovery and resolution, or plans to improve overall risk management. Consultation with FHFA staff is expected in making any such changes. As the Enterprises are under FHFA conservatorship, any post-assessment actions would require FHFA's prior approval.

Results should include effects on capital, as required under the DFAST rule. Specifically, and in accordance with the rule, each Enterprise must calculate how each of the following is affected during each quarter of the stress test planning horizon, for each scenario:

 Aggregate losses, pre-provision net revenues, and capital positions over the planning horizon. • Capital levels and capital ratios (including regulatory capital and net worth) and any other capital ratios, as specified by FHFA.

#### **Incomplete Data**

The Enterprises are required to report all data elements in the attached FHFA DFAST templates. Failure to submit complete data to FHFA in a timely manner may result in remedy or penalty authorized under the Federal Housing Enterprises Financial Safety and Soundness Act of 1992, as amended (12 U.S.C. 4501 et seq.) (Safety and Soundness Act).

### **Evaluation of Stress Test Processes** and Results

FHFA will focus particular attention on the processes related to the implementation of the scenarios to ensure that these processes are robust and that they capture and stress key vulnerabilities and idiosyncratic risks facing the entity and that the translation of the scenario into loss, revenue, and capital projections is conceptually sound and implemented in a well-controlled manner. FHFA will evaluate the extent to which stress testing processes at the Enterprises adhere to the regulatory principles outlined in Appendix 1. FHFA will also review the stress results for reasonableness.

FHFA will review each Enterprise's assumptions for reasonableness and consistency with the assumptions used by the other Enterprise. FHFA may require an Enterprise to adjust its assumptions or resubmit its results where FHFA deems the stress test results, assumptions, or processes are unacceptable.

#### **Appendix 1: Regulatory Expectations for a Stress Testing Process**

An Enterprise's stress testing process should adhere to the following principles:

Principle 1: The Enterprise has a sound risk measurement and management infrastructure that supports the identification, measurement, assessment, and control of all material risks arising from its exposures and business activities.

- A satisfactory stress testing process requires (1) a comprehensive risk identification process, and (2) complete and accurate measurement and assessment of all material risks.
- An Enterprise should measure or assess the full spectrum of risks that face the Enterprise, using both quantitative and qualitative methods, where applicable.
- The Enterprise should have data capture and retention systems that allow for the input, use, and storage of information required for sound risk identification and measurement and to produce reliable inputs for assessments of capital adequacy.
- Quantitative processes for measuring risks should meet supervisory expectations for model effectiveness and be supported by robust model development, documentation, validation, and overall model governance practices. Both qualitative and quantitative processes for assessing risk should be transparent, repeatable, and reviewable by an independent party.

• Any identified weaknesses in risk measures used as inputs to the stress testing process should be documented and reported to relevant parties, with an assessment of the potential impact of risk-measurement weaknesses on the reliability of the stress test results.

**Principle 2:** The Enterprise has effective processes for translating risk measures into estimates of potential losses over a range of stressful scenarios and environments and for aggregating those estimated losses across the Enterprise.

- Stress tests should include methodologies that generate estimates of potential losses for all material risk exposures, one of which should be an enterprise-wide stress test using scenario analysis. Methodologies should be complementary, not suffer from common limitations, and minimize reliance on common assumptions.
- Using the loss estimation methodologies for its various risk exposures, an Enterprise should develop consistent and repeatable processes to aggregate its loss estimates on an Enterprise-wide basis.
- An Enterprise should demonstrate that its loss estimation tools are developed using sound modeling approaches, appropriate for the manner in which they are being employed, and that the most relevant limitations are clearly identified, well documented, and appropriately communicated.

• An Enterprise should recognize that its loss projections are estimates and should have a good understanding of uncertainty around those estimates, including the potential margin of error and the sensitivity of the estimates to changes in inputs and key assumptions.

**Principle 3:** The Enterprise has a clear definition of available capital resources and an effective process for estimating available capital resources (including any projected revenues) over the same range of stressful scenarios and environments used for estimating losses.

- Management and the board of directors should understand the loss absorption capabilities of the components of the Enterprise's capital base and maintain projection methodologies for each of the capital components included in relevant capital adequacy metrics.
- In estimating available capital resources, an Enterprise will need to consider not only its current positions and mix of capital instruments, but also how its capital resources may evolve over time under varying circumstances and stress scenarios.
- As part of a comprehensive enterprisewide stress testing program, projections of pre-provision net revenue (PPNR) should be consistent with balance sheet and other exposure assumptions used for related loss estimation. Projections should estimate all key elements of PPNR, including net interest income, non-interest income, and non-interest expense at a

level of granularity consistent with material revenue and expense components.

- An Enterprise should demonstrate that its capital resource estimation tools are developed using sound modeling approaches, appropriate for the manner in which they are being employed, and that the most relevant limitations are clearly identified, well documented, and appropriately communicated.
- An Enterprise should recognize that its projections of capital resources are estimates and should have a good understanding of the uncertainty around those estimates, including the potential margin of error and the sensitivity of the estimates to changes in inputs and key assumptions.

**Principle 4:** The Enterprise has processes for bringing together estimates of losses and capital resources to assess the combined impact on capital adequacy in relation to the Enterprise's stated goals for the level and composition of capital.

- An Enterprise should have a comprehensive and consistently executed process for combining loss, resource, and balance sheet estimates to assess the baseline and post-stress impact of those estimates on capital measures.
- An Enterprise should calculate and use several capital measures that represent both leverage and risk at specified time horizons under both baseline and stressful conditions, consistent with its capital

policy framework. Measures should include quarterly estimates for the impact on capital and leverage ratios, as well as other capital and risk measures useful in assessing overall capital adequacy.

- The processes for bringing together estimates of losses and capital resources should ensure that appropriately stressful conditions over the Enterprise's planning horizon have been incorporated to properly address the institution's unique vulnerabilities.
- The processes should provide for the presentation of any information that may have material bearing on the Enterprise's capital adequacy assessment, including all relevant risks and strategic factors, as well as key uncertainties and process limitations.

**Principle 5:** The Enterprise has a comprehensive capital policy and robust capital planning practices for establishing capital goals, determining appropriate capital levels and composition of capital, making decisions about capital actions, and maintaining capital contingency plans.

#### Capital Policy

• A capital policy is defined as an Enterprise's written assessment of the principles and guidelines used for capital planning, capital issuance, usage, and distributions, including internal capital goals, the quantitative or qualitative guidelines for dividend and stock repurchase decisions, the strategies for addressing potential capital shortfalls, and the internal governance procedures around capital policy principles and guidelines.

- An Enterprise should establish capital goals aligned with its risk appetite and risk profile as well as expectations of stakeholders, providing specific targets for the level and composition of capital. The Enterprise should ensure that maintaining its internal capital goals will allow it to continue its operations under stressful conditions.
- The capital policy should describe the decision making processes regarding capital goals, the level and composition of capital, capital actions, and capital contingency plans, including an explanation of the roles and responsibilities of key decision makers and information and analysis used to make decisions.
- The Enterprise should outline in its policy specific capital contingency actions it would consider to remedy any current or prospective deficiencies in its capital position, including any triggers and escalation procedures. The policy should also include a detailed explanation of the circumstances in which it will reduce or suspend a dividend or repurchase program, or will not execute a previously planned capital action.
- An Enterprise should establish a minimum frequency with which its capital plan is reevaluated (at least annually). In addition, an Enterprise should review its capital policy at least annually to ensure it remains relevant and current.

#### Capital Planning Practices

• At regular intervals, an Enterprise should compare the estimates of baseline and post-stress capital measures (see Principle 4) to the capital goals established in the capital policy for purposes of informing capital decisions.

- For capital decisions, consideration should be given to any information that may have material bearing on the Enterprise's capital adequacy assessment, including all relevant risks and strategic factors, key uncertainties, and limitations of the stress test.
- Assessments of capital adequacy and decisions about capital should be supported by high quality data and information, informed by current and relevant analysis, and subject to challenge by senior management and the board of directors.
- Periodically, the Enterprise should conduct a thorough assessment of its capital contingency strategies, including their impact, timing, feasibility under stress, and potential stakeholder reactions.
- An Enterprise should administer its capital planning activities and capital decision processes in conformance with its policy framework, documenting and justifying any divergence from policy.

**Principle 6:** The Enterprise has robust internal controls governing capital adequacy process components, including policies and procedures, change control, model validation and independent review, comprehensive documentation, and review by internal audit.

• The internal control framework should encompass the entire stress test, including the risk measurement and management systems used to produce input data, the

- models and other techniques used to estimate loss and resource estimates, the process for making capital adequacy decisions, and the aggregation and reporting framework used to produce management and board reporting. The set of control functions in place should provide confirmation that all aspects of the stress test are functioning as intended.
- Policies and procedures should ensure a consistent and repeatable process and provide transparency to third parties for their understanding of an Enterprise's stress test processes and practices. Policies and procedures should be comprehensive, relevant to their use in the stress test, periodically updated and approved, and cover the entire stress test and all of its components.
- Specific to the stress test, an Enterprise should have internal controls that ensure the integrity of reported results and that all material changes to the stress test and its components are appropriately documented, reviewed, and approved. An Enterprise should have controls to ensure that management information systems are robust enough to support stress tests with sufficient flexibility to run ad hoc analysis as needed.
- Expectations for validation and independent review for components of the stress test are consistent with existing supervisory guidance on model risk management. Models should be independently validated or otherwise reviewed in line with model risk management and model governance expectations.

- An Enterprise should have clear and comprehensive documentation for all aspects of its stress test, including its risk measurement and management infrastructure, loss- and resource-estimation methodologies, the process for making capital decisions, and efficacy of control and governance functions.
- An Enterprise's internal audit should play a strong role in evaluating the stress test and its components. A full review of the capital adequacy process component should be done by audit periodically to ensure that as a whole the stress test is functioning as expected and in accordance with the Enterprise's policies and procedures. Internal audit should review the manner in which stress test deficiencies are identified, tracked, and remediated.
- Principle 7: The Enterprise has effective board and senior management oversight of the stress test, including periodic review of the Enterprise's risk infrastructure and loss and resource estimation methodologies, evaluation of capital goals, assessment of the appropriateness of stressful scenarios considered, regular review of any limitations and uncertainties in all aspects of the stress test, and approval of capital decisions.
  - The board of directors should make informed decisions on capital adequacy by receiving sufficient information detailing the risks the Enterprise faces, its exposures and activities, and the impact that loss and resource estimates may have on its capital position.

- Information provided to the board of directors about capital adequacy should be framed against the capital goals established by the Enterprise and by obligations to external stakeholders, and consider capital adequacy for the Enterprise with respect to the current circumstances as well as on a proforma, post-stress basis.
- The information the board of directors reviews should include a representation of key limitations, assumptions, and uncertainties within the stress test, enabling the board of directors to have the perspective to effectively understand and challenge reported results. The board of directors should take action when weaknesses in the stress test are identified, giving full consideration to the impact of those weaknesses in their capital decisions.
- Senior management should ensure that all weaknesses in the stress test are identified, as well as key assumptions, limitations, and uncertainties, and evaluate them for materiality (both individually and collectively). Senior management also should have remediation plans for any weaknesses affecting stress test reliability or results.
- Using appropriate information, senior management should make informed recommendations to the board of directors about the Enterprise's capital, including capital goals and distribution decisions. Senior management should include supporting information to highlight key assumptions, limitations, and uncertainties in the stress test that may affect capital decisions.

• An Enterprise should appropriately document the key decisions about capital adequacy—including capital actions—made by the board of directors and senior management, and describe the information used to make those decisions.

#### **Appendix 8: Data Notes**

The following are descriptions of data through 2020:Q4 (as released through January 15, 2021). The 2020:Q4 values of variables marked with an asterisk (\*) are estimates.

**U.S. real GDP growth\***: Quarterly percent change in real gross domestic product (chained 2012 dollars), expressed at an annualized rate, Bureau of Economic Analysis (NIPA table 1.1.6, line 1).

**U.S. nominal GDP growth\*:** Quarterly percent change in gross domestic product (current dollars), expressed at an annualized rate, Bureau of Economic Analysis (NIPA table 1.1.5, line 1).

**U.S. real disposable income growth\*:** Quarterly percent change in real disposable personal income (current-dollar values divided by the price index for personal consumption expenditures), expressed at an annualized rate, Bureau of Economic Analysis (NIPA table 2.1, line 27, and NIPA table 1.1.4, line 2).

**U.S. nominal disposable income growth\*:** Quarterly percent change in disposable personal income (current dollars), expressed at an annualized rate, Bureau of Economic Analysis (NIPA table 2.1, line 27).

**U.S. unemployment rate:** Quarterly average of seasonally adjusted monthly unemployment rates for the civilian, non-institutional population aged 16 years and older, Bureau of Labor Statistics (series LNS14000000).

**U.S. CPI inflation:** Percent change in the quarterly average of seasonally adjusted monthly levels of the all-items CPI for all urban consumers (CPI-U), expressed at an annualized rate, Bureau of Labor Statistics (series CUSR0000SA0).

**U.S. 3-month Treasury rate:** Quarterly average of 3-month Treasury bill secondary market rate on a discount basis, H.15 Release, Selected Interest Rates, Federal Reserve Board (series RIFSGFSM03\_N.B).

**U.S. 5-year Treasury yield:** Quarterly average of the yield on 5-year U.S. Treasury notes, constructed for the FRB/US model by Federal Reserve staff based on the Svensson smoothed term structure model (see Lars E. O. Svensson, 1995, "Estimating Forward Interest Rates with the Extended Nelson–Siegel Method," Quarterly Review, no. 3, Sveriges Riksbank, pp. 13–26).

**U.S. 10-year Treasury yield:** Quarterly average of the yield on 10-year U.S. Treasury notes, constructed for the FRB/U.S. model by Federal Reserve staff based on the Svensson smoothed term structure model; (see Svensson, "Estimating Forward Interest Rates").

**U.S. BBB corporate yield:** Quarterly average of ICE BofAML U.S. Corporate 7-10 Year Yield-to-Maturity Index, ICE Data Indices, LLC, used with permission. (C4A4 series.)

**U.S. mortgage rate:** Quarterly average of weekly series for the interest rate of a conventional, conforming, 30-year fixed-rate mortgage, obtained from the Primary Mortgage Market Survey of the Federal Home Loan Mortgage Corporation. **U.S. prime rate:** Quarterly average of monthly series, H.15

**U.S. prime rate:** Quarterly average of monthly series, H.15 Release (Selected Interest Rates), Federal Reserve Board (series RIFSPBLP\_N.M).

**U.S. Dow Jones Total Stock Market (Float Cap) Index:** End-of-quarter value via Bloomberg Finance L.P.

**U.S.** House Price Index\*: Price Index for Owner-Occupied Real Estate, Z.1 Release (Financial Accounts of the United States), Federal Reserve Board (series FL075035243.Q divided by 1000). **U.S.** Commercial Real Estate Price Index\*: Commercial Real Estate Price Index, Z.1 Release (Financial Accounts of the United States), Federal Reserve Board (series FL075035503.Q divided by 1000).

U.S. Market Volatility Index (VIX): VIX converted to quarterly frequency using the maximum close-of day value in any quarter, Chicago Board Options Exchange via Bloomberg Finance LP. Euro area real GDP growth\*: Quarterly percent change in real gross domestic product at an annualized rate, staff calculations based on Statistical Office of the European Communities via Haver, extended back using ECB Area Wide Model dataset (ECB Working Paper series no. 42).

**Euro area inflation:** Percent change in the quarterly average of the harmonized index of consumer prices at an annualized rate, staff calculations based on Statistical Office of the European Communities via Haver.

Developing Asia real GDP growth\*: Quarterly percent change in real gross domestic product at an annualized rate, staff calculations based on data from Bank of Korea via Haver; National Bureau of Statistics of China via Haver; Indian Central Statistics Office via Haver; Census and Statistics Department of Hong Kong via Haver; and Taiwan Directorate-General of Budget, Accounting and Statistics via Haver.

**Developing Asia inflation\*:** Percent change in the quarterly average of the consumer price index, or local equivalent, at an annualized rate, staff calculations based on data from National Bureau of Statistics of China via Haver; Indian Ministry of Statistics and Programme Implementation via Haver; Labour Bureau of India via Haver; Statistics Korea (KOSTAT) via Haver; Census and Statistics Department of Hong Kong via Haver; and Taiwan Directorate-General of Budget, Accounting and Statistics via Haver.

Japan real GDP growth\*: Quarterly percent change in gross domestic product at an annualized rate from 1980 to present and percent change in gross domestic expenditure at an annualized rate prior to 1980, Cabinet Office of Japan via Haver. Japan inflation\*: Percent change in the quarterly average of the consumer price index at an annualized rate, based on data from the Ministry of Internal Affairs and Communications via Haver. U.K. real GDP growth\*: Quarterly percent change in gross domestic product at an annualized rate, U.K. Office for National Statistics via Haver.

**U.K. inflation:** Percent change in the quarterly average of the consumer price index at an annualized rate from 1988 to present and percent change in the quarterly average of the retail prices index prior to 1988, staff calculations based on data from the U.K. Office for National Statistics via Haver. **Exchange rates:** End-of-quarter exchange rates, H.10 Release (Foreign Exchange Rates), Federal Reserve Board.
