Subject: Comments regarding RIN 2590-AA42

I'm writing because the poor and oppressed in my city are even more poor and more oppressed than they were before the financial collapse.

We need to put these people first. We need to make sure that our financial system ensures that they have good housing and financial security so that they can take care of their children and make sure that they will be able to contribute constructively to society.

This country should not be building prisons to house people but distributing wealth is such a way that people who live in gated communities have less so that people who are poor and relegated to criminal status in this country can find work that allows them to attain financial security.

People who work in the financial sector can afford to go without a bonus. (I used to be a consulting making six-figures, so I know.) Those moneys should be redirected to building up the cores of our cities. We will all be happier and safer as a result.

Thank you for considering my comment,
