Dear Alfred M. Pollard,

We work in the solar energy industry. Over the last couple of years, the solar energy industry has doubled each year. Momentum is strong, but there are still some obstacles to homeowners.

One main obstacle is the upfront cost and another is whether the customer moves after installing the system. By installing a solar energy system on a house and financing the system through a low interest option that is assessed on the customer's property taxes, both of these obstacles are removed.

Solar energy is a great help to the utilities, especially during the summer heat when solar panels are performing well throughout the day and the utility is burdened with peak usage. Making one's community less dependent on blackouts or price hikes because of peak demands will make for a much more stable lifestyle.

PACE accomplishes the above and at the same time drives revenue in the local industry. It is the most straightforward way to make sure the our communities are energy efficient and not dependent on foreign fuel sources.

Please strongly consider PACE and the positive effects it has on towns and villages across the country.

Have a great weekend.

Chris
