Technical note

Technical Note

Coverage of Expanded-Data Indexes Broadens from 50 to 410 Metro Areas

Starting with the release of the 2026Q1 FHFA House Price Index[®] (HPI) report, U.S. Federal Housing (Federal Housing Finance Agency or FHFA) will begin publishing quarterly Expanded-Data house price indexes for 410 metropolitan areas,¹ up from 50. This increased coverage underscores FHFA's continued commitment to providing the public with comprehensive and granular information on housing market trends.

Expanded-Data house price indexes now include additional Metropolitan Statistical Areas (MSAs) and Metropolitan Divisions (MSADs). These additions are made possible by the 2023 update to data sourced from county recorder offices that improved both geographical and historical coverages.² Previously, the Expanded-Data HPI was published only for the 50 largest metropolitan areas based on Census Population Estimates, limited historically by inadequate sample sizes for metro areas with smaller populations. Coalescing sales records from various sources, the combined sample captures a comprehensive set of arms-length sales of single-family homes taking place across the United States, regardless of how the purchases were funded. Figure 1 compares two maps: the previous coverage (50 metro areas) on the top and the updated coverage (410 metro areas) on the bottom. The updated list accounts for all but one³ of the metropolitan areas in the United States and spans 1,185 counties (or county-equivalents) across all 50 states and the District of Columbia. There is no methodological difference between the new set of estimates and those previously released.

This change in coverage only affects the Expanded-Data indexes. The two other metropolitan area indexes—Purchase-Only indexes for 100 metro areas and All-Transactions indexes for 410 areas—will see no change in coverage. Note that the All-Transactions indexes and Expanded-Data indexes now cover the same set of 410 metropolitan areas. The list of metro areas released for each index can be found in Table 1.

¹ Indexes for all 410 areas through 2025Q3 are available for download at https://www.fhfa.gov/document/2026m01_hpi_technical_note_expanded_indexes.xlsx.

² For more information on the county recorder data source update, see <https://www.fhfa.gov/sites/default/files/2024-01/Source-Update-for-County-Recorder-Data-FHFA-HPI-Impact.pdf>.

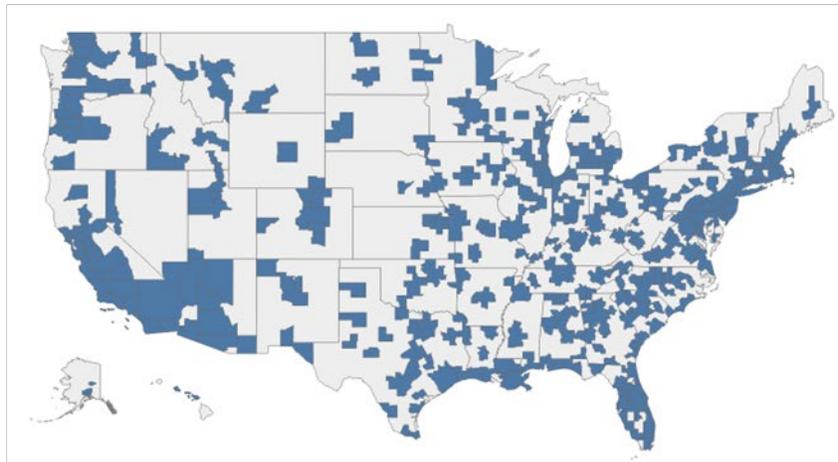

³ Eagle Pass, TX is a newly recognized MSA by the 2023 OMB definition but is excluded from FHFA HPI list due to very limited sample size. It is also the least populated MSA as of 2023 Census Population Estimates. 13 MSAs containing Metropolitan Divisions recognized by OMB are covered by 37 MSAD-level indexes, along with the remaining 373 MSAs. For MSA and MSAD definitions, please see OMB Bulletin 23-01 (<https://www.whitehouse.gov/wp-content/uploads/2023/07/OMB-Bulletin-23-01.pdf>).

Figure 1. Map of Metropolitan Areas Covered by Expanded-Data Indexes:
Previous vs. New

Previous – 50 Metro Areas

New – 410 Metro Areas

(Note: Alaska and Hawaii are not to scale)

While Expanded-Data HPI offers a more comprehensive view into many housing markets by drawing from samples that are sufficiently large and free of refinance appraisals, its use still merits caution in some cases. Each additional data source it incorporates comes with an extra exposure to potential irregularities that can confound estimation for reasons not directly related to housing markets. For instance, a data delay in one source can distort the combined sample. Such distortion can potentially manifest itself as divergence in time-series behaviors across index types, so users are advised to weigh each option carefully when faced with unusual contrasts in index movements. It is important to understand the differences between all FHFA HPI indexes before choosing a particular index to track and analyze house price trends. More discussions on various indexes can be found in the “Overview of available data sets” section of the accompanying report and on the Frequently Asked Questions webpage: <https://www.fhfa.gov/faqs/hpi>.

How Metro-level estimates of Expanded-Data HPI compare to All-Transaction HPI

Focusing on the Expanded-Data and All-Transactions indexes that share availability for all 410 metro areas, our examination of metro-level estimates revealed that: 1) House price trends in most metro areas track similarly, irrespective of index type; and 2) cases with major time-series divergences were defined by segregated episodes rather than a unifying pattern. In particular, we see synchronicity in the five years following the first quarter of 2020 when the Covid-19 pandemic and subsequent economic stimulus caused a structural shift in the housing market. Cumulative house price appreciations during this period averaged 58.8 percent in the Expanded-Data indexes and 58.6 percent in the All-Transactions indexes, with 373 out of 410 areas showing no more than a 10-percentage point difference between the two types.

Figure 2. Cumulative House Price Appreciations in 410 Metro Areas:
All-Transactions vs. Expanded-Data Index
(2020Q1 through 2025Q3, log scale)

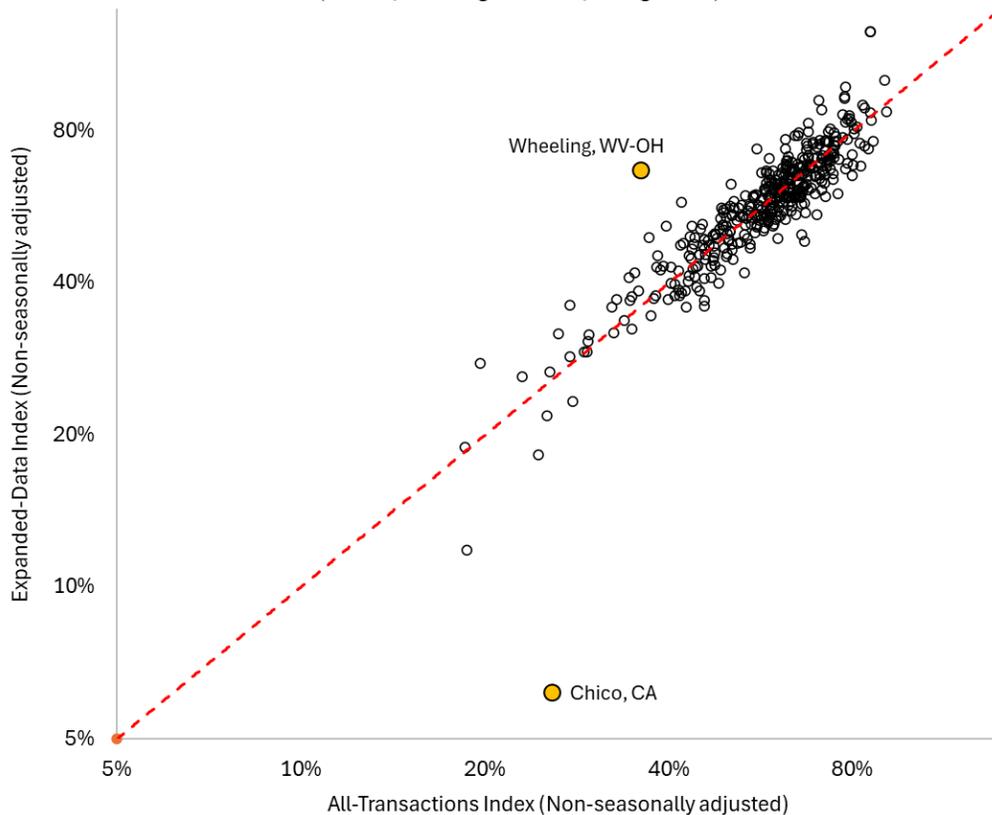

Figure 2 plots house price appreciation rates for all 410 metro areas, with horizontal axis positions based on the All-Transactions index and vertical axis positions determined by the Expanded-Data index. For example, Wheeling, WV-OH, annotated as the upper orange dot, was one area where the Expanded-Data index showed significantly higher price appreciation (67.0%)

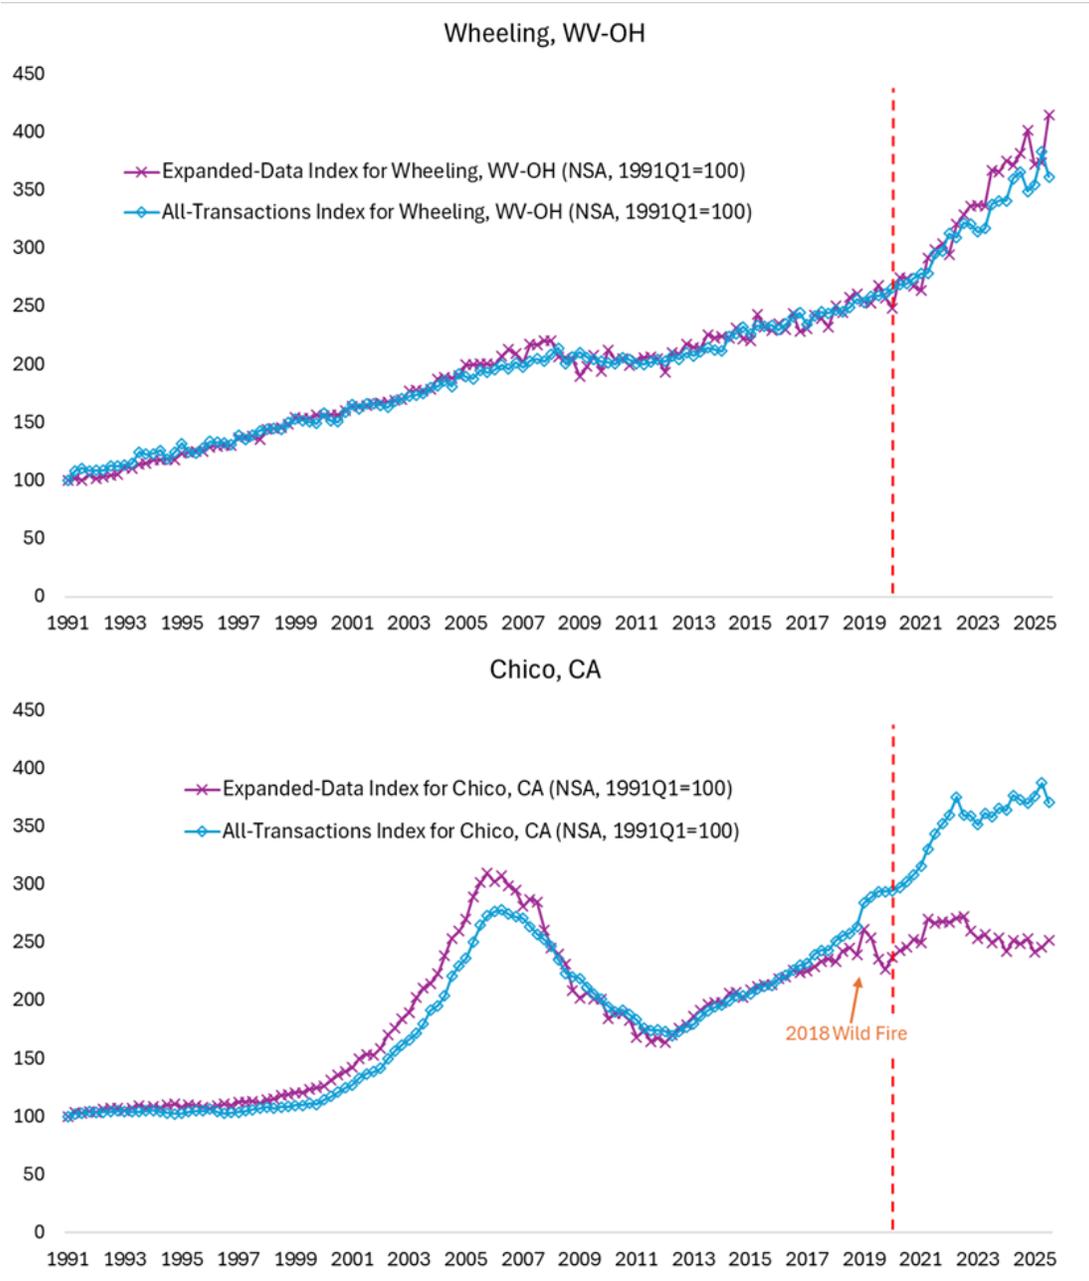

compared to the All-Transactions index (36.0%). On the contrary, Chico, CA at the bottom shows much slower growth of the Expanded-Data index (6.2%) compared to the All-Transactions index (25.8%) for the same period. Overall, in most areas the two indexes aligned well, as illustrated by the consolidation of dots around the red dashed 45-degree line.

Larger discrepancies observed between the two indexes are attributable to a variety of causes. Many cases simply result from small sample sizes that make index estimates more susceptible to idiosyncratic spikes caused by inclusion (or exclusion) of a few outliers. For example, as highlighted in Figure 2, Wheeling, WV-OH is a demonstrative example of smaller-sample areas where the difference between two individually volatile time-series also fluctuates in a similarly volatile manner. The relative standard errors for Wheeling, WV-OH averaged 3.3 percent for the Expanded-Data index and 5.6 percent for the All-Transactions index during the five-year period, significantly higher than the respective medians of 1.8 percent and 1.4 percent over all 410 areas.⁴ The top chart in Figure 3 shows the two indexes trending similarly for that metro area despite sizable deviations on a quarter-to-quarter basis. Growing volatility in both series is likely due to the recent volume compression in home sales and refinances.

On the other hand, the bottom chart in Figure 3 shows a sharp, qualitative divergence between All-Transactions and Expanded-Data indexes for Chico, CA, starting from the fourth quarter of 2018. This is likely linked to the Camp Fire in 2018 that caused catastrophic property damage concentrated in Paradise, CA within the MSA boundary of Chico, CA. The disaster constricted originations of both purchase and refinance mortgages in the affected area, which in turn drove a significant shift in the geographical composition of the All-Transactions sample. Conversely, the Expanded-Data index is confounded by non-qualified mortgages or cash sales of properties directly affected by the fire, captured in county recorder data. Treating a price decline tied to the disaster as if it were from a repeat sale of the same property can skew the index downwards since the quality of the structure will have degraded significantly from when the house was previously sold.

⁴ Expanded-Data (and Purchase-Only) indexes employ a base period of 1991Q1, whereas All-Transactions indexes are based to 1995Q1. For the purposes of this exercise, Expanded-Data standard errors were derived from estimations rebased to 1995Q1. This is necessary because the underlying coefficient levels in the repeat-transactions model are all relative to the chosen base period. For more technical discussions, see HPI Technical Description at <https://www.fhfa.gov/research/papers/house-price-indexes-hpi-technical-description>. Relative standard errors for all quarters through 2025Q3 are reported in the supplemental data file at https://www.fhfa.gov/document/2026m01_hpi_technical_note_expanded_indexes.xlsx.

Figure 3. All-Transactions and Expanded-Data Index Series in Wheeler, WV-OH and Chico, CA

It should be noted that while Chico, CA is a uniquely conspicuous case, similar patterns of event-driven divergence may be present elsewhere albeit in less apparent ways. Natural disasters or intense local economic distress can cause indexes to behave differently due to underlying sample designs.

Further Background

This broadened release of Expanded-Data indexes for metropolitan areas is a part of FHFA's effort to make available to the public information on U.S. housing markets based on data that it regularly collects as a part of its statutorily mandated duties (12 U.S.C. §4542). The All-Transactions indexes were the first FHFA HPIs to be released at the metro level, started in 2000 by FHFA's predecessor, the Office of Federal Housing Enterprise Oversight. All-Transaction indexes have since been published for almost all metropolitan areas including Metropolitan Divisions. The regular release of Purchase-Only indexes for metropolitan areas began in 2009 for the 25 largest metro areas and then gradually widened to cover 100 areas, as GSE mortgage volume grew in broad segments of U.S. housing markets.⁵ Expanded-Data indexes for metro areas began in 2012 for 25 areas,⁶ expanding to 50 areas in 2018.

Developmental FHFA HPI indexes based on structure type (i.e., manufactured housing), alternative designs (i.e., Distress-Free indexes) and finer geographical granularities (such as county- and ZIP-level annual indexes) have continued to be added for public use, all of which are available at <https://www.fhfa.gov/HPI>. Questions and comments on this update or generally on Expanded-Data HPI can be submitted in e-mail to HPIQuestions@fhfa.gov. Answers to frequently asked questions on various aspects of the FHFA HPI are accessible online at <https://www.fhfa.gov/faqs/hpi>.

⁵ Currently, as of 2025Q4, the statistics in HPI Quarterly Report for all geographic levels is based on seasonally-adjusted versions of Purchase-Only indexes.

⁶ For more information, see the Highlights article in https://www.fhfa.gov/sites/default/files/2023-03/2012q3_hpifocus_n508.pdf.

Note 1: For geographic delineations of each Core Based Statistical Area (CBSA) or Metropolitan Division (MSAD), please see OMB Bulletin 23-01 (<https://www.whitehouse.gov/wp-content/uploads/2023/07/OMB-Bulletin-23-01.pdf>).

Note 2: "Old list" shows what FHFA HPI release had included prior to its 2025Q4 HPI report and the "New list" denotes what will be released going forward (beginning February 2026). Highlighted cells indicate changes.

Note 3: Population ranks are determined based on Census Bureau's Population Estimates as of July 2023 (<https://www2.census.gov/programs-surveys/popest/datasets/2020-2023/metro/totals/cbsa-est2023-alldata.csv>). When the new CBSA-delineation is adopted (typically every five years), the list refreshes with new population estimates.

Further background information

Overview of FHFA HPI

The FHFA House Price Index® (FHFA HPI®) is a broad economic measure of the movement of single-family house prices in the United States. While FHFA produces the HPI by statutory mandate (12 U.S.C. 4542), it began in 1995 with predecessor agency, the Office of Federal Housing Enterprise Oversight. The initial reports only contained information about regional and national house price movements. But sample coverage has expanded with better access to new data sources and technological improvements for processing such information. Today, indexes cover all 50 states and over 400 American cities with information extending back to the mid-1970s.

FHFA constructs several indexes for different market geographies and periods. The entire suite is often referenced as the “FHFA HPI” to reflect that we create all indexes in the same technical manner. The flagship FHFA HPI is the Purchase-Only Index, which uses seasonally adjusted, purchase-only data. This index is the most common choice for press releases, news stories, and social media. FHFA created additional indexes to address questions about house price changes in other market segments such as refinances, Federal Housing Administration (FHA) mortgages, or the entire single-family property market. Data constraints preclude the production of some kinds of indexes in certain geographic areas, but multiple index types (flavors) are generally available. Quarterly reports usually contain index flavors such as:

- “Purchase-Only” HPI: Tracks changes in transaction prices for conforming, conventional mortgages that are purchased or securitized
- “All-Transactions” HPI: Adds appraisal values from refinance mortgages to the Purchase-Only HPI data sample
- “Expanded-Data” HPI: Adds sales price information sourced from county recorder offices and FHA-backed mortgages to the Purchase-Only HPI data sample. We use this index to adjust the conforming loan limits, which establishes the dollar amount of loans that Fannie Mae and Freddie Mac can acquire.
- “Distress-Free” HPI: Removes sales of bank-owned properties and short sales from the Purchase-Only dataset
- “Annual” HPI. Uses the All-Transactions data but constructs indexes on a yearly basis to provide data for very small geographic areas like counties, ZIP codes, and census tracts
- “Manufactured Housing” HPI. We use data on conventional mortgages for single-family detached manufactured homes acquired by the Enterprises. Personal property loans are removed from the dataset. This index should be considered developmental.

The summary table below details the frequency and geography of the available indexes.

	National	Census Division	States	MSAs or Cities	ZIP3, Non-metro	ZIP Codes	Counties	Census Tracts
Monthly	✓	✓						
Quarterly	✓	✓	✓	✓	✓			
Annual	✓	✓	✓	✓	✓	✓	✓	✓

FHFA builds the HPI suite on tens of millions of home sales and offers insights about house price fluctuations at various geographic levels. For more information, see the [HPI Frequently Asked Questions](#).

FHFA HPI Release Dates for 2026

Public FHFA HPI® releases occur at 9AM ET and include a press release, tables, figures, and associated data.

Date	Release Type	Latest Included Data
Tuesday, January 27	Monthly Index	November 2025
Tuesday, February 24	Quarterly Index (with Monthly Tables)	December 2025 and 2025Q4
Tuesday, March 31	Monthly Index	January 2026
Tuesday, April 28	Monthly Index	February 2026
Tuesday, May 26	Quarterly Index (with Monthly Tables)	March 2026 and 2026Q1
Tuesday, June 30	Monthly Index	April 2026
Tuesday, July 28	Monthly Index	May 2026
Tuesday, August 25	Quarterly Index (with Monthly Tables)	June 2026 and 2026Q2
Tuesday, September 29	Monthly Index	July 2026
Tuesday, October 27	Monthly Index	August 2026
Tuesday, November 24	Quarterly Index (with Monthly Tables)	September 2026 and 2026Q3
Tuesday, December 29	Monthly Index	October 2026

All data are freely available for download from the FHFA HPI website at

<https://www.fhfa.gov/data/hpi>
