October 24

Select Weighted Tabulations, 2013 – 2023

The following tables provide survey data for mortgage originations from 2013 to 2023. Most of the tables provided use analysis weights developed to represent the population of new mortgages in the NMDB. In some tables, the percentages may not sum to 100 percent due to rounding or the presence of multiple response options. Additionally, some questions were only asked for loans originated in certain years. In this report, “NA” is displayed in years when a question was not asked. This report also applies a minimum sample size for reporting a weighted statistic. Year columns are omitted when the sample size for a statistic falls below the minimum.

In many tables, purchase mortgages are separated from other mortgages. Purchase mortgages may include first-time homeowners or repeat purchasers of a home and generally involve a move to a new address. The other mortgages are labeled “refinance”, but include loans taken out to replace a previous loan or loans, loans taken out on a previously mortgage-free property, loans to add or remove co-borrowers, and construction loans. The driving variable to determine our classification of purchase and refinance mortgages is X33.

The following tables are listed in the order that the questions appear in the survey instrument. Some detailed follow-up questions were skipped to keep this section brief. Not all questions were asked in all years, so some tables cannot cover older originations. The results of these tables closely correlate to analogous results from the Home Mortgage Disclosure Act (HMDA) data released by the Consumer Financial Protection Bureau (CFPB) for closed-end, first lien residential mortgages during each year.

Table 1: When you began the process of getting this mortgage, how familiar were you with each of the following?*
